

PIYUSH SHARMA

DATA ANALYST | DEMAND INTELLIGENCE & SUPPLY PLANNING

Delhi, India · 8586998460 · piyushsh0920@gmail.com · [GitHub](#) · [LinkedIn](#)

PROFESSIONAL SUMMARY

Data Analyst with 2+ years of experience in P&C Insurance Operations at Xceedance, combining data quality, KPI reporting, reconciliation, process optimisation and stakeholder collaboration with hands-on expertise in SQL, Python, Power BI, statistics and forecasting. Pursuing an Executive Diploma in Data Science & AI from IIIT Bangalore. Built demand-focused analytics projects spanning time-series forecasting, operational dashboards, geographic demand analysis and supply/capacity recommendations. Strong foundation in structured problem-solving, optimisation and translating analysis into business-friendly insights.

CORE SKILLS

Analytics: EDA, Data Cleaning, Data Profiling, Root Cause Analysis, KPI Analysis, Statistical Analysis

SQL: MySQL, Joins, CTEs, Subqueries, Window Functions, Aggregations, CASE, Data Transformation

Python: Pandas, NumPy, ScikitLearn, Statsmodels, Matplotlib, Seaborn

BI & Excel: Power BI, DAX, Power Query, Excel, Pivot Tables, Lookups, Scenario Analysis

Forecasting & ML: Time Series, ARIMA, SARIMA, Exponential Smoothing, Regression, Classification, Feature Engineering, Model Evaluation

Data Modelling: Star Schema, Dimensional Modelling, Role-playing Dimensions, Data Warehousing

Optimisation: Linear Programming, Excel Solver, Route Optimisation, Facility Allocation, Sensitivity Analysis, Heuristics

Tools: PySpark, Tableau, Jupyter Notebook, GitHub, VS Code, Google BigQuery

EDUCATION

IIIT BANGALORE | Executive Diploma in Data Science & AI | 2025 – Present

Relevant: Python, SQL, Statistics, Machine Learning, Time Series Forecasting, NLP, Model Evaluation & Regularisation, Advanced Data Visualisation

UNIVERSITY OF DELHI | B.A. Mathematics & Office Management | 2020 – 2023

Relevant: Calculus, Operations Research, Statistical Thinking, Documentation & Professional Workflows

PROFESSIONAL EXPERIENCE

XCEEDANCE | Senior Executive – Insurance Operations | Apr 2026 – Present | P&C Insurance

- Promoted within two years, taking expanded ownership of rater development, team training and cross-functional client coordination.

XCEEDANCE | Executive – Insurance Operations | Mar 2024 – Apr 2026 | P&C Insurance

- Designed and maintained Excel-based raters incorporating complex pricing logic and policy parameters for US insurance clients.
- Owned data reconciliation across policy systems, validating entries, resolving discrepancies and ensuring accuracy before client delivery.
- Monitored KPIs against SOP benchmarks, conducted audits and authored process documentation supporting repeatable data workflows.
- Collaborated with US-based brokers and internal stakeholders across time zones to translate business requirements into structured data outputs.
- Improved policy-processing efficiency by approximately 20% through workflow redesign and process optimisation.

SELECTED PROJECTS

Airline Passenger Demand Forecasting | *Python · Pandas · Statsmodels · Scikit-learn · Time Series*

[GitHub](#)

- Built and evaluated 13 forecasting models on 144 monthly airline passenger observations (1949–1960) to support demand, budgeting, staffing and operational resource planning.
- Compared Naive, moving-average, Linear Regression, exponential smoothing, AR/MA/ARMA/ARIMA and SARIMA approaches using a 120-month training set and 24-month holdout set.
- Applied seasonal decomposition, ACF/PACF analysis, Box-Cox variance stabilisation and differencing to diagnose trend, seasonality and autocorrelation.
- Selected SARIMA(7,1,4)(0,1,0,3) as the final model and evaluated forecasts using RMSE and MAPE, demonstrating evidence-based model selection.

Namma Yatri — Demand & Operational Analytics Dashboard | *Power BI · DAX · Power Query · Data Modelling · Excel*

[GitHub](#)

- Built an end-to-end Power BI analytics solution covering the full ride lifecycle across 37 Bengaluru zones, from search attempts to completed rides.
- Designed a relational model with role-playing pickup/drop dimensions and developed DAX measures for trip volume, revenue, cancellation, completion and quote-to-completion rates.
- Identified time- and zone-level demand patterns using heatmaps and trend analysis; analysed operational hotspots and demand concentration.
- Found 48.17% customer cancellation, 47.25% driver cancellation and 45.49% successful ride rates; recommended predictive driver positioning in peak zones/hours and operational interventions.

NYC Yellow Taxi — Demand & Supply Operations Analytics | *Python · Pandas · NumPy · GeoPandas · EDA*

[GitHub](#)

- Performed end-to-end EDA on 2023 NYC Yellow Taxi data to analyse travel demand, revenue trends, operational inefficiencies and geographic hotspots.
- Cleaned and combined monthly trip data; analysed demand across hours, days, months and zones, along with fare, distance, passenger and payment behaviour.
- Used geospatial analysis to identify high-traffic pickup/drop-off zones, spatial demand hotspots and persistent pickup-to-dropoff imbalances.
- Identified congestion-prone routes and translated findings into fleet rebalancing, peak-period capacity, routing and pricing recommendations.

SUPPLY CHAIN & OPTIMISATION EXPOSURE

- Logistics optimisation: route optimisation, vehicle routing, TSP/VRP, facility allocation and capacity-constrained planning.
- Facility optimisation: demand/supply centre analysis, network optimisation, gravity location modelling and logistics-cost considerations.
- Prescriptive analytics: objective functions, decision variables, constraints, Excel Solver, sensitivity analysis, binding/slack constraints and heuristic methods.
