

PIYUSH SHARMA

Data Analytics × GenAI

New Delhi, India · 8586998460 · piyushsh0920@gmail.com · linkedin.com/in/piyush-sharma-6591171ba · github.com/piyush0920 · piyush0920.github.io

PROFILE

Data and GenAI practitioner with 2+ years of experience in P&C insurance operations, working across data quality, KPI reporting, reconciliation, and process optimisation. Alongside this, I've built a broad applied data science and analytics portfolio — spanning Power BI dashboards, statistical and machine learning models, time-series forecasting, big-data ETL pipelines, and GenAI/RAG systems — through an Executive PG Diploma in Data Science & AI (equivalent to PGD) from IIIT Bangalore. I enjoy connecting business questions to data, building practical analytical solutions, and communicating findings clearly to both technical and non-technical audiences.

TECHNICAL SKILLS

- | Languages & Core Tools — Python (pandas, NumPy, scikit-learn), SQL, R, Advanced Excel (formulas, Pivot Tables, Macros)
- | Business Intelligence — Power BI (DAX, Power Query, data modelling), Tableau (academic exposure)
- | Machine Learning — Classification (SVM, Decision Tree), regression (Ridge/Lasso), time-series forecasting (ARIMA/SARIMA), NER (CRF), model evaluation and tuning (GridSearchCV, cross-validation)
- | Deep Learning — Neural network-based image classification using both PyTorch and TensorFlow
- | GenAI / LLM — LangChain, RAG pipeline design, prompt engineering, vector databases (ChromaDB), structured evaluation (RAGAS)
- | Big Data & Cloud — PySpark, Spark SQL, AWS S3/Lambda, GCP (academic/project exposure)
- | Business Analysis — Agile, BRD authoring, PESTLE, Porter's Five Forces, BCG Matrix, McKinsey 7S, AARRR
- | Domain — P&C insurance operations (rate/premium structures, policy pricing, reconciliation, compliance-adjacent process work)

WORK EXPERIENCE

Senior Executive, P&C Insurance Operations (Management Liability & Professional Lines)

Xceedance · New Delhi, India · 2+ years · Progressed Analyst → Process Expert → Senior Executive

- | Own Excel-based rater tools and financial models for policy pricing and premium calculations, ensuring accuracy across large operational datasets
- | Build and maintain KPI reports and dashboards tracking team-level performance, turnaround times, and quality metrics for management review
- | Perform recurring and ad-hoc reconciliation and data quality checks, identifying discrepancies and anomalies and recommending resolutions
- | Author and maintain SOPs and process documentation to support consistency, audit-readiness, and knowledge transfer across the operations team
- | Manage client queries and tickets in Zendesk, overseeing team workflows and ensuring timely, quality resolution
- | Communicate findings clearly to clients and cross-geography stakeholders, and train/onboard new team members on tools and quality standards

EDUCATION

Executive PG Diploma in Data Science & AI (equivalent to PGD) — IIIT Bangalore, delivered via upGrad

2025–2026 · GPA: 3.82/4.00 · Python, SQL, Statistics, Machine Learning, Deep Learning/NLP (PyTorch, TensorFlow), Power BI/Tableau, PySpark & Big Data, Cloud (AWS/GCP), GenAI/LLM Specialization, Applied Business Analysis, Supply Chain Optimization

B.A. in Mathematics and Office Management (OMSP) — University of Delhi

2020–2023 · Coursework in Advanced Mathematics, Operational Research, R Programming

SELECTED PROJECTS

Namma Yatri Ride-Hailing Power BI Dashboard

- | Built a 5-table star schema data model (DAX, Power Query, role-playing dimensions); full EDA across demand by hour, revenue, payment methods, zone performance, and quote-to-completion funnel; delivered technical and management PowerPoint presentations

RAG Pipeline over Legal Document Corpus

- | Built a full RAG pipeline (LangChain, ChromaDB, HuggingFace embeddings, Ollama) over an 84,844-chunk legal corpus; anti-hallucination prompt design and structured evaluation via RAGAS/ROUGE (faithfulness 0.71, context precision 1.0)

Cardiovascular Risk Prediction

- | Binary classification on 68,775 patient records (SVM, Decision Tree, scikit-learn); GridSearchCV tuning, class imbalance handling, sensitivity-specificity cutoff selection; formal report with embedded analysis

Airline Passenger Demand Forecasting

- | Evaluated 13 forecasting models (Naive through SARIMA) with Box-Cox transformation and RMSE/MAPE benchmarking (statsmodels, scipy) for model selection

California Traffic Collision ETL & Analysis

- | Built an end-to-end ETL pipeline (PySpark, Spark SQL, SQLite) over 1M+ records, transforming and standardizing large-scale collision data with exports to AWS S3

Image Classification with Neural Networks

- | Built and compared neural network-based image classifiers (alphabet and animal recognition) using both PyTorch and TensorFlow

NER on Recipe Data

- | CRF-based named entity recognition (sklearn-crfsuite) with contextual feature engineering and class-weighted imbalance handling; 99.93% validation accuracy

Car Price Prediction

- | Regression modelling with Ridge/Lasso regularization (scikit-learn) for price estimation
